

FINPILOT

Your financial navigator

A decision-support system for personal finance: it tells you what to do with your money — and explains why.

• Live product • v2.0.2

People don't know what to do with their money

51.9%

“know the basics, but get lost in complex financial decisions”

survey, 385 respondents

- **Pay off debt early, or save for a goal?**

The most common question — with no simple answer.

- **Banking apps show the past.**

“Where the money went” — not “what to do next.”

- **70.1% rely on built-in bank stats.**

Only 18.7% use a dedicated financial tool.

FINPILOT — not a tracker, an advisor

Trackers describe the past. FINPILOT tells you what to do with every free ruble — and shows the math.

Tells you what to do

How much to put toward debt, reserve, and goals — a concrete monthly allocation of your free cash.

Explains why

Transparent math (SAW + Avalanche), not a black box. You see how and why it's calculated.

Shows the future

A Monte-Carlo forecast with a confidence interval: what happens to your finances under this plan.

People trust transparent math, not an “AI black box”

32%

trust a transparent algorithm

= FINPILOT

22%

trust AI as a black box

a typical “AI assistant”

Everyone's building AI
assistants.

Explainability and transparency are
our counter-positioning — and a future
trust brand.

Bank PFM is descriptive. The
prescriptive layer — nobody does it
yet.

How it works

The user enters income, expenses, debts, and goals — the engine returns an allocation, an explanation, and a forecast.

ENGINE

SAW

Avalanche

Monte-Carlo

Transparent math, not a black box.

• FINPILOT · Financial overview

 $R(t)$ · reserve

39,500 ₺

 $L(t)$ · liquidity

0.28

 $D(t)$ · debt load

0.35

BLR · buffer

3.4

Monthly recommendation

• Debt 20% • Reserve 40% • Goals 40%

Why: debt load is healthy → reserve first

Big market, realistic entry

TAM

~80M users

~160B ₺ / year — the whole money-management market

SAM

~8M people

~10–13B ₺ / year — our profile segment

SOM

realistic, 3–5 yrs

~5–30M ₺ / year — obtainable share
(B2C)

Bottom-up method: users × conversion × ARPU. Assumptions — in the strategy doc.

B2C is the storefront, B2B is the money

B2C · subscription

- Freemium: tracking is free
- Engine (what to do + forecast) — paid
- 199–299 ₺ / mo

B2B · infrastructure

- License the engine via API
- Advisors: 1,500–3,000 ₺/seat
- Services per-MAU · banks white-label

Hybrid C → B

- B2C gives PMF, data, and a case
- B2B gives revenue and a moat
- A sequence, not a choice

It works on organic

ARPPU

250 ₺/mo

CL

12 mo

LTV

3,000 ₺

LTV / CAC

≥ 3 ✓

ARPPU < value. We charge 250 ₺; we save the client thousands of ₺ in interest overpayment.

LTV vs CAC, ₺

Paid CAC $\approx$ LTV $\rightarrow$ grow organically; ads only after retention.

An advisor vs. trackers

The customer's job (JTBD): “decide what to do with my free money — and explain why.”

Who does the job	Strength	Weakness
Bank PFM	free, built-in	blind spot, past only
Trackers (CoinKeeper, Zenmoney)	bank sync, familiar	describe, don't advise
Excel / in your head	free, flexible	manual, abandoned in 2 weeks
FINPILOT	tells you what to do and why	forecast + alternatives comparison

Not a hypothesis — proven

v2.0.2

Live product

Not an idea or prototype — a working engine, with screens.

385

Survey respondents

Three times more than the strongest teams in our cohort.

**61 / 59 /
54%**

Top trust drivers

Comparing alternatives, numeric explanation, transparency — = FINPILOT.

Organic growth, mobile-first

A playbook proven in our cohort: content → anticipation → launch. Cheap, no ad-budget burn.

Content channel

“Pay off or save”
breakdowns — showing
the engine in action.

Waitlist

Capturing demand and
anticipation before the
bot ships.

Telegram bot

Mobile-first: 76.7% want
mobile, 25% want a TG
bot.

Organic

Goal — CAC $\ll$ 1,000 ₺.
LTV/CAC $\geq$ 3 only this
way.

Founder

[Name Surname]

Founder · backend developer · author of the product and engine

Single-handedly designed and built a live product, v2.0.2: the math engine (SAW, Avalanche, Monte-Carlo), the backend, and the interface. A strong signal of execution — the product already exists, not on paper.

Fill in name / photo. Hiring plan — next stage.

Investment & roadmap

We're raising

[amount]

for [N] months. Where:

- Product & mobile (Telegram bot)
- Organic growth & content
- First B2B pilot with advisors

ROADMAP

● Now → 6 mo

Telegram bot, onboarding to aha, retention metrics

● 6 → 18 mo

Paid engine, organic growth, first B2B pilot

● 18+ mo

B2B infrastructure (API, white-label) — core revenue

Thank you

Make smart financial decisions accessible to everyone — transparent and clear.
