

FINPILOT

Transparent financial decisions, anywhere

An explainable engine that tells people what to do with their money — and shows the math. Not a black box.

• Live product • v2.0.2

People everywhere don't know what to do with their money

45M+

US adults use a digital money tool — yet most still don't know what to do with their cash

source: CFPB

- **Pay off debt or save?**

No app gives a simple, trusted answer.

- **Mint shut down in 2024.**

Millions of users were left searching for a replacement.

- **Trackers show the past.**

AI apps nudge you — as an opaque black box.

AI advice is rising — but it's a black box

32%

trust a transparent algorithm

= FINPILOT

22%

trust AI as a black box

a typical “AI assistant”

AI money apps are the #1 trend.

But trusting a black box with your money is hard — explainability is the wedge.

Open banking (Plaid, PSD2) makes data easy — the gap is trust, not access.

A transparent advisor, not another tracker

Trackers describe the past. Black-box AI nudges you. FINPILOT tells you what to do — and shows the math.

Tells you what to do

A concrete monthly split of free cash across debt, reserve, and goals.

Explains why

Transparent math (SAW + Avalanche) — you see how and why, not a black box.

Shows the future

A Monte-Carlo forecast with a confidence interval for the chosen plan.

How it works

The user enters income, expenses, debts, and goals — the engine returns an allocation, an explanation, and a forecast.

ENGINE

Monthly recommendation

• Debt 20% • Reserve 40% • Goals 40%

Why: debt load is healthy → reserve first

Large, fast-growing, fragmented

TAM

\$25–32B

global personal-finance apps · ~20% CAGR

SAM

\$3–4B

PFM advisory-software niche · ~12% CAGR

SOM

via B2B

obtainable through infrastructure, not
frontal B2C

North America ~47% of the market; Asia-Pacific fastest-growing. Sized bottom-up (see analysis).

Transparent prescriptive is the open space

After Mint closed, the field consolidated — but no one owns transparent, holistic, prescriptive advice.

Player	What it does	Limitation
Monarch	full-featured tracking + planning	describes; advice is light
Rocket Money	tracking + subscription cancel	describes, doesn't advise
YNAB	method-driven budgeting	manual; no forecast
Cleo	AI chatbot advice (debt reset)	black box, not explainable
FINPILOT	transparent prescriptive advice + forecast	our edge

Explainability is the wedge

Transparency isn't a feature — it's the strategy. It earns trust, unlocks compliance, and turns the engine into infrastructure.

Trust

Transparent math beats black-box AI — people trust what they can see over an opaque assistant.

Compliance

Explainable, auditable decisions are an advantage for regulated B2B — banks and advisors need it.

Infrastructure

The engine is licensable, not just an app — a bigger, more defensible market than another tracker.

Infrastructure first, app as proof

B2B · infrastructure

- License the engine via API
- Fintechs · advisors · banks
- Explainability = compliance edge

B2C · proof & funnel

- Freemium tracking + advice
- Validates value, feeds data
- Public proof for B2B

Sequence C → B

- Prove with consumers first
- Then license to institutions
- Higher ceiling, defensible

Prove at home, scale via B2B

Not a frontal B2C assault on the US/EU. A sequence that plays to our strengths and avoids the incumbents.

Prove at home

Validate in RU/CIS —
engine built, less
crowded.

Pluggable sync

One aggregator
(Plaid/Tink) → thousands
of banks.

B2B abroad

License the engine;
explainability wins
compliance.

Emerging markets

Underserved, open; Asia-
Pacific fastest-growing.

Working product, scalable core

v2.0.2

Live product

A working engine, not an idea or a deck.

32 > 22%

Trust the transparent

People trust shown math over black-box AI (our research).

1 engine

Source-agnostic core

Pluggable providers → new markets and B2B without rebuilding.

Founder

[Name Surname]

Founder · backend developer · author of the product and engine

Single-handedly designed and built a live product, v2.0.2: the math engine (SAW, Avalanche, Monte-Carlo), the backend, and the interface. A strong signal of execution — the product already exists, not on paper.

Fill in name / photo. Hiring plan — next stage.

Investment & roadmap

We're raising

[amount]

for [N] months. Where:

- Prove the model at home (RU/CIS)
- Pluggable bank-sync + mobile
- First B2B pilot abroad

ROADMAP

● Now → 6 mo

Prove at home: bot, onboarding, retention

● 6 → 18 mo

Provider layer, paid engine, first B2B pilot

● 18+ mo

B2B infrastructure abroad — explainability wedge

Thank you

Make financial decisions transparent and trustworthy
— everywhere.
